UITP SEMINAR ON DOUBLING PT SHARE

SPECIAL FOCUS ON IT SOLUTIONS FOR PUBLIC TRANSPORT

Updated Brochure

Organiser

International Association of Public Transport

Host

Directorate of Urban Land Transport

Objectives

It is believed that the information and communication technologies are essential for the development of economy and the society in the current days. Government of India has planned to set up “100 Smart Cities” which include “Integrated Public Transport Plan”.

The application of IT solutions for public transport are:

- Scheduling, Planning and Integration of Public Transport
- Cashless Transaction including Electronic Ticketing, Automatic Fare Collection
- Interoperable Fare Management
- Fleet and Traffic Management
- Dynamic Passenger Information System
- Safety and Surveillance
- Incident Management and Automatic Response System
- Customer Services, Security and Safety

These are very crucial to be adopted in enhancing PT services. Technological innovations such as real-time travel information and on-line journey planners have made journeys by public transport smoother and easier.

Innovative public transport services that offer top-quality mobility option will help attract more passengers. Services that fit with people's busy, modern lifestyles will make public transport the obvious transport choice. The success of public transport system would always depend on designing of best integration of all modes of public transport.

Invitation

International Association of Public Transport (UITP) and Directorate of Urban Land Transport (DULT) are together organizing the Seminar “UITP Seminar on Doubling PT Share –Special focus on IT Solutions for Public Transport” to be held in Bangalore, India on 7th May 2015 and in Bangalore and cordially invite the delegates to the event.

Directorate of Urban Land Transport, Bangalore, is delighted to be the host for the event and utmost preparations for a successful and meaningful seminar are being made to ensure complete satisfaction of all the participants. The Seminar is planned to address various issues in this area and to share the best practices adopted, the initiatives as well as plans which are on the anvil in these areas across the globe and in India.

Introduction

Public Transport plays a vital role in boosting economic growth by respecting environment, reducing congestion and providing mobility for everyone in ever-growing cities. Radical change towards less use of personalized vehicles like cars and two wheelers is the need of the hour without which cities will no longer be able to live, breathe and grow. According to WHO Report, 13 of the 20 most polluted cities in the world are in India. If people are really to be convinced to move around sustainably, they have to be offered a wide range of comfortable and easily available mobility options that fit with their own lifestyle values.

Apart from improving service quality and increasing capacity for public transport, there is also a requirement of comprehensive review of the service portfolio and facilities. It is essential to adopt information technology in to the public transport system to enhance public transport rider ship. Information Technology is playing an evermore crucial role in many sectors of modern society offering the most important solutions that we have today to efficiently help increase capacity, safety and security among other aspects. This is even more with the case in the public transport sector for which IT tools are potentially always available, widely applicable and actually already well integrated in many public transport systems around the World.
